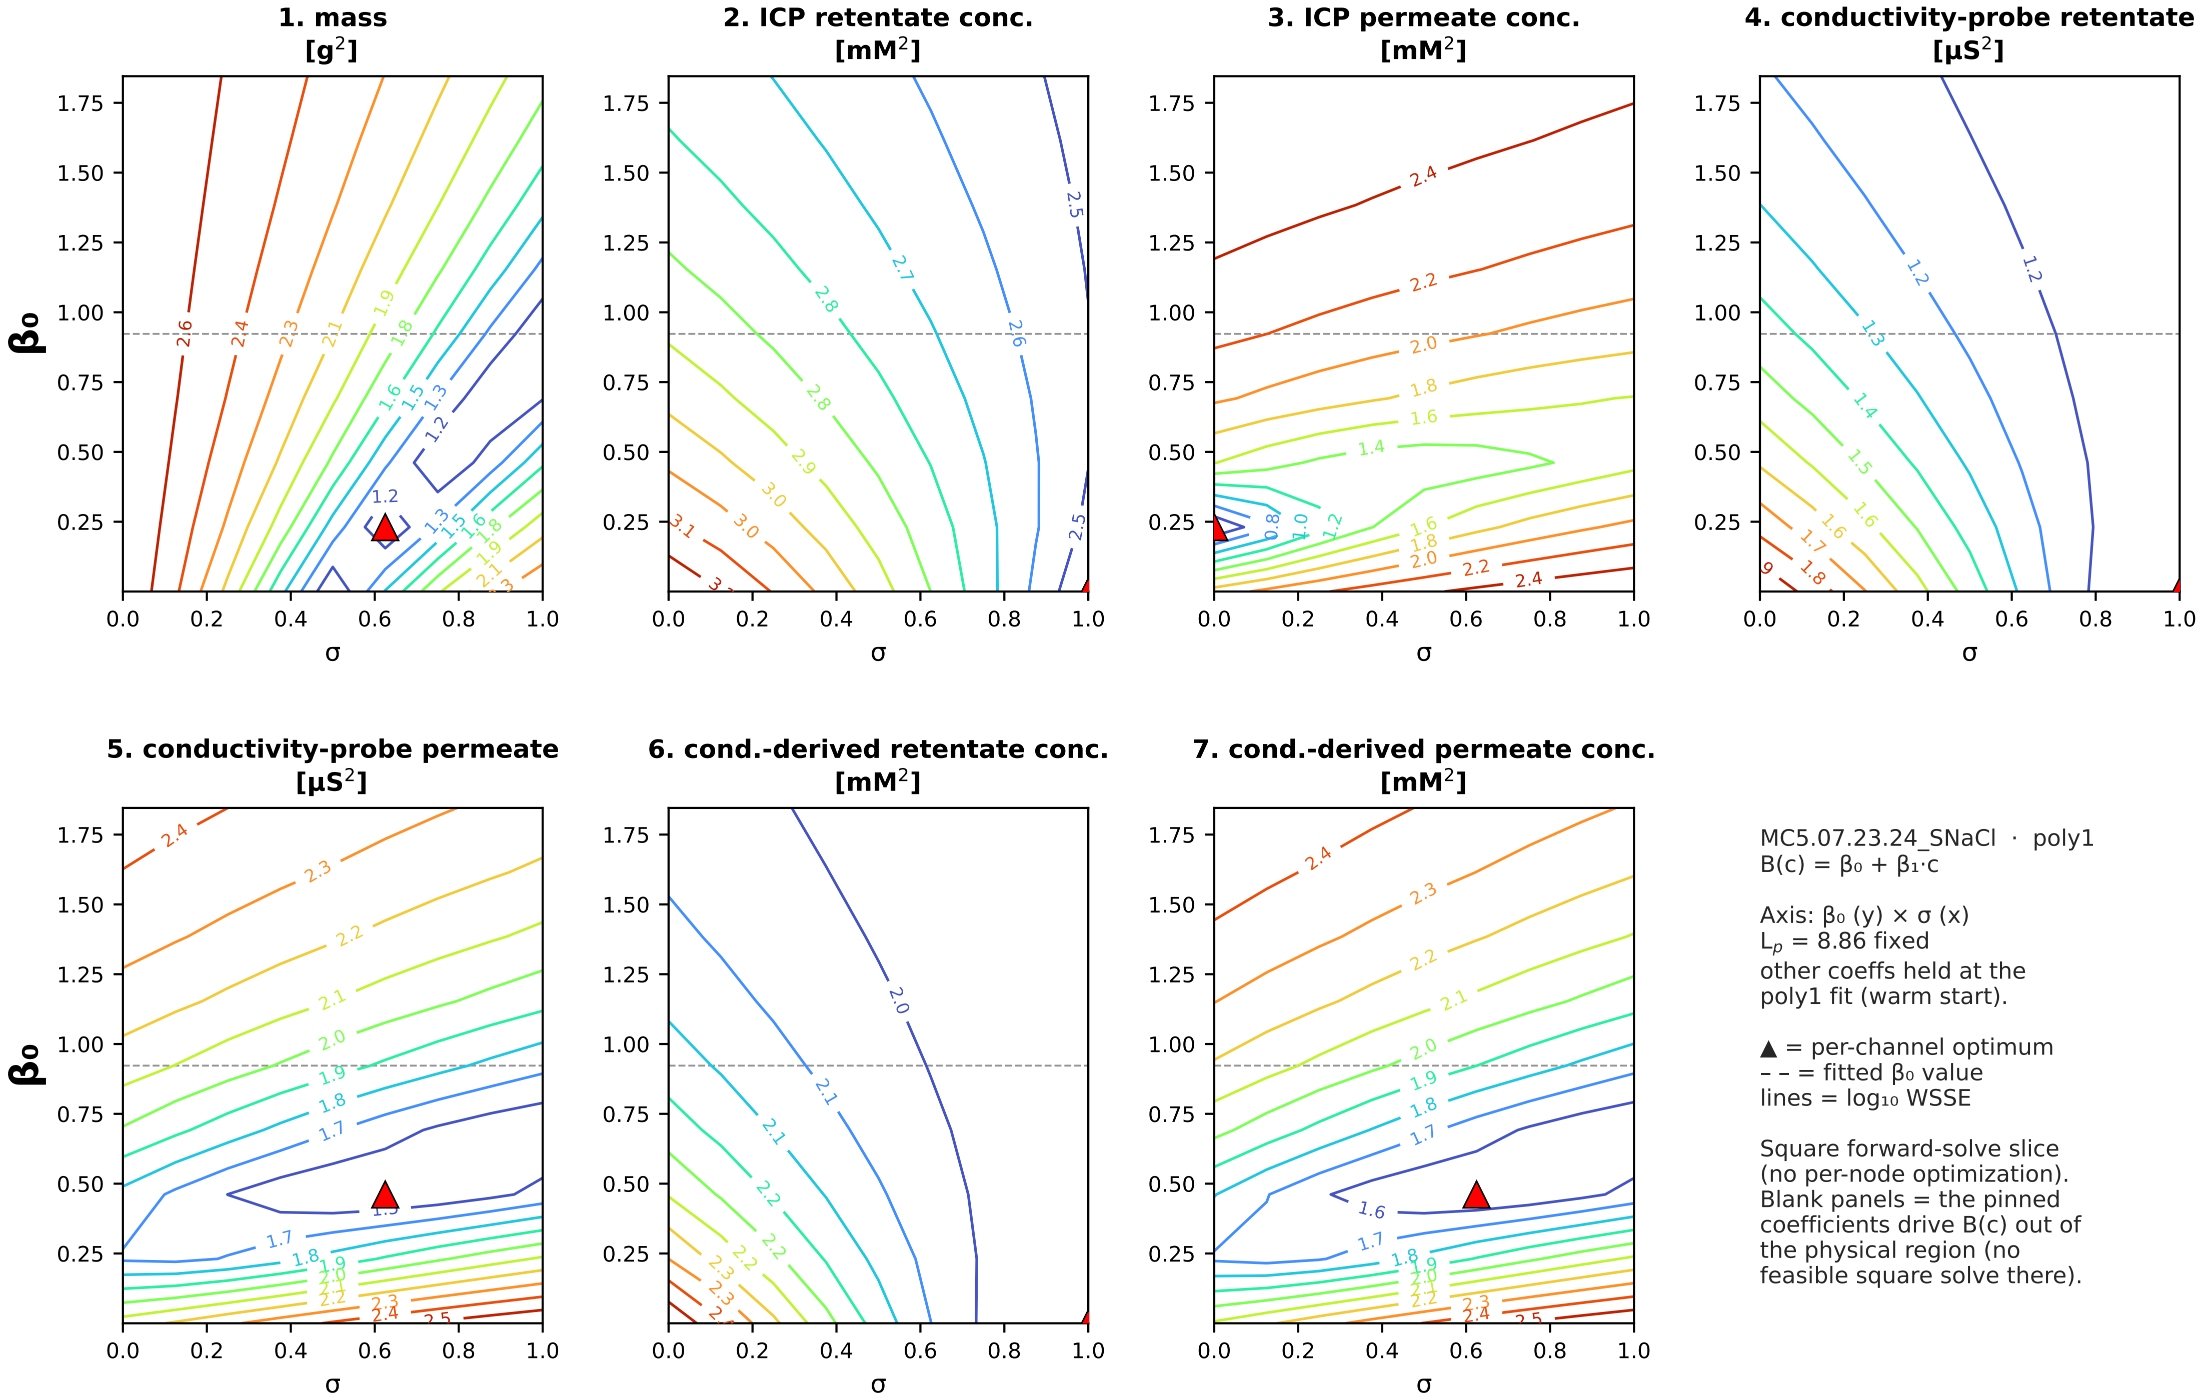
MC5.07.23.24_SNaCl (MC5.07.23.24) · poly1: $B(c) = \beta_0 + \beta_1 \cdot c$ · $\beta_0 \times \sigma$ square slice (B as a function of interfacial conc.)



MC5.07.23.24_SNaCl · poly1
$B(c) = \beta_0 + \beta_1 \cdot c$

Axis: β_0 (y) × σ (x)
L_p = 8.86 fixed
other coeffs held at the poly1 fit (warm start).

▲ = per-channel optimum
– – = fitted β_0 value
lines = $\log_{10}$ WSSE

Square forward-solve slice (no per-node optimization). Blank panels = the pinned coefficients drive B(c) out of the physical region (no feasible square solve there).
