

## AR(1)-whitened $\chi(c)$ null-check: NaCl (should flatten) vs. CaCl<sub>2</sub> (should survive)

NaCl ( $\hat{\phi}=0.75$ , whitened spread still not flat)

CaCl<sub>2</sub> ( $\hat{\phi}=1.00$ , whitened spread still not flat)

..... constant  $\chi$     - - - i.i.d. 1-knot spline    — AR(1)-whitened 1-knot spline
